UNIVERSITÄT BERN OESCHGER CENTRE CLIMATE CHANGE RESEARCH

- Is CESM able to realistically simulated winter cyclones over Europe?
- How do cyclone characteristics change in a seamless simulation from AD 850 -2100?
- Has external forcing an influence on cyclone characteristics?

UNIVERSITÄT BERN

OESCHGER CENTRE

Experimental setup

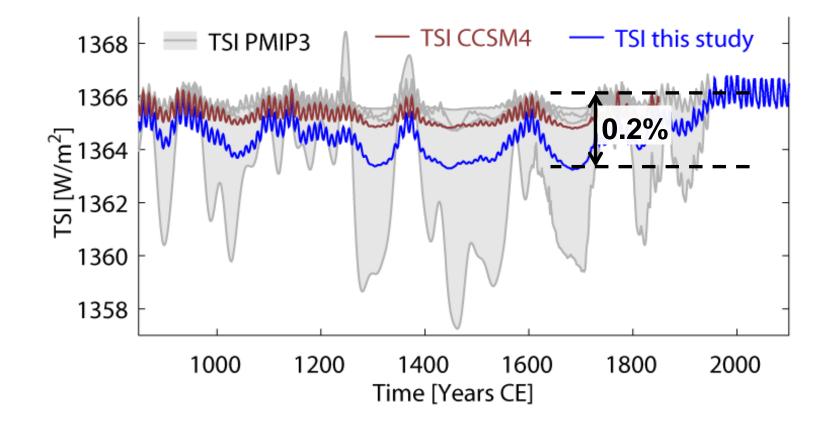

CESM 1.0.1:

- CAM4, CLM4, CICE, POP2
- 0.9x1.25_gx1v6 (approx. 1°)
- Prognostic carbon cycle does not feed back to radiative code; climate is forced by reconstructed forcing

Experiments:

- 500 year control 850, branched from piControl (1850)
- Transient simulation from 850 to 2100 with RCP8.5 with 12 h output data

Experimental setup: solar forcing

Conclusions

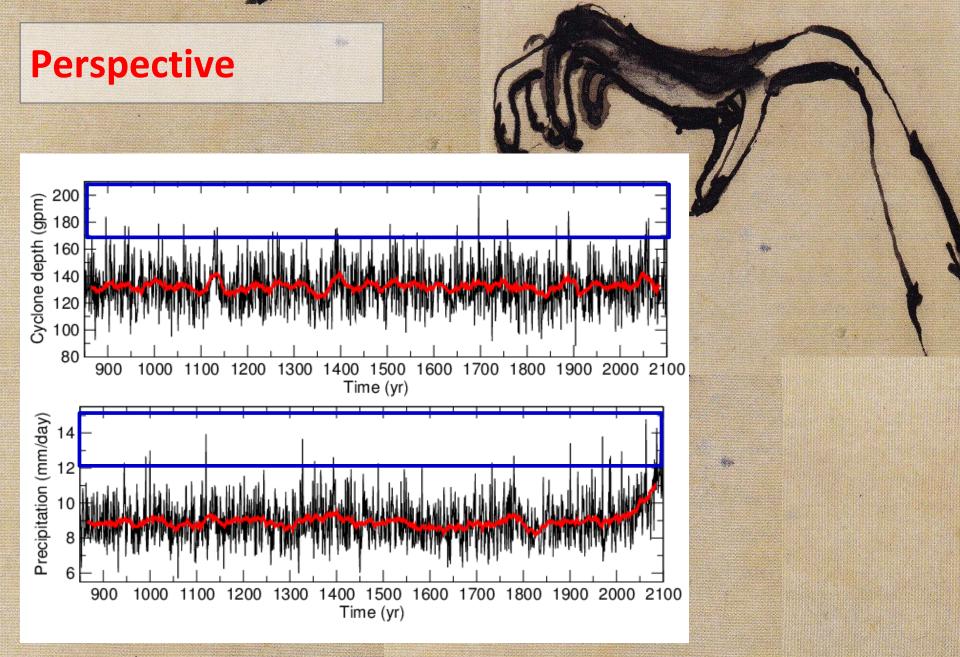

- Is CESM able to realistically simulated winter cyclones over the North Atlantic?
 - Yes, but some biases remain, like underestimation of Mediterranean cyclones, underestimation of cyclone length and cyclone related precipitation
- How do cyclone characteristics change in a seamless simulation from AD 850 -2100?
 - Pronounced interanual and decadal scale variability
 - Interesting extreme cyclone seasons
- Has external forcing an influence on cyclone characteristics?
 - At a first glance no, but a detailed analysis is still pending

UNIVERSITÄT

Perspective

Detailed analysis of forcing imprint?

- Correlation/Composite with respect to solar forcing
- Superposed epoch analysis for volcanic forcing
- Mechanisms for decadal variations?
- Analysis of extreme winter season with respect to wind and precipitation intensity focusing over Europe

«The blessing hand of the abbess» Victor Hugo (1802–1885)

Next steps

- > Detailed analysis of forcing imprint
 - Correlation/Composite with respect to solar forcing
 - Superposed epoch analysis for volcanic forcing
- Analysis of extreme winter season with respect to wind and precipitation intensity focusing over Europe
